

Technical Data Sheet

HSM - High Speed Masonry Core Drills

RECOMMENDED SPEED

Recommended speed for these cores is largely governed by the power tool itself. This is because they are designed to be used in power tools where in the majority of cases there is no facility to regulate the speed (SDS Plus, SDS Max machines etc.).

If used in a machine where speed regulation is possible, a general recommendation is the larger diameter of the core drill being used, the slower the speed.

MATERIAL RECOMMENDATIONS

- Heavy Duty Concrete ●
- General Concrete ●
- Hard Bricks ●
- Soft Bricks ●
- Lightweight Blocks ●
- Natural Stone ●
- Constructional Granite ●
- Limestone ●

● Very suitable

TECH TIP!

When cleanliness of breakout is critical, turn off hammer action and use 'rotary only' mode for the last part of the drilling process

When used with relevant adaptor

M16 x 2.0

When used with relevant adaptor and 3 jaw chuck

Coring can be carried out in 'rotary and impact' mode or 'rotary only' mode
